Lanyuan <u>blood smear tool</u>: an item designed to eliminate the need to remove the stopper of a tube of blood when making a smear.

Image

Using method

 $1 \ {\rm Holding}$  the tube upright, insert Lanyuan blood dispenser cannula into the lid of the tube.

2 Invert the tube onto a glass slide or other receptor.

3 Press the head of Lanyuan blood dispener into the glass slide to produce a drop of blood.

4 Remove the tube and discard Lanyuan blood dispenser component or the entire tube.

Advantage

 $\ensuremath{\mathsf{LY}}$  blood smear tool is a safe and effective tool in the lab.

- 1 A quicker blood dispensing method than applicator sticks and capillary tubes.
- 2 A simple way to get consistently sized blood drops.

3 An clear way to show blood flow.

4 An alternative to removing a tube's lid for every collection.
