

## **Custom Reinforced Non Woven Disposable Medical Surgical gown**

### **Specifications:**

The critical zones including arm and chest areas are protected by fabric reinforcement with an additional strong and breathable SMMS. The seams on the sleeves are ultrasonic sealed to avoid fluid penetration through pin holes.

Function medical folding of the gown ensures safe handling under sterile conditions. There are SMS, PP+PE and impregnated paper pad available, with our great and exquisite craftwork, the reinforced gowns will give your maximum protection. Meets ASTM test for viral penetration (ASTM F1617) and ASTM test for blood penetration (ASTM1670). Earns AAMI Level 4 Protection as basic requirement.

  - Low-linting material helps to provide a clean environment
  - Long sleeves with knit cuffs provide added comfort

We are the [China disposable medical surgical gown supplier](#) ,Any interesting welcome to contact us.

### **Surgical gown:**

Surgical gowns are personal protective equipment used by many people in health care. Surgical gowns are used by surgeons and the surgical team for all types of procedures. Modern surgical gowns provide a breathable, protective barrier for the surgeons and all health care providers.

Surgical gowns are produced non-reinforced or reinforced. Non-reinforced surgical gowns are less durable and designed for surgical procedures with low to moderate fluid contact. Reinforced surgical gowns have reinforced protection in specific critical areas for more invasive and intense surgical procedures.

Most surgical gowns are made from a fabric called SMS. SMS stands for Spunbond Meltblown Spunbond. SMS is a lightweight and comfortable non-woven fabric that provides a protective barrier.
